Introduction to Computational Cognitive Modeling

In Part III we address the statistical analysis and computation of a variety of advanced models, such as generalized linear models, autoregressive and moving average models, Gaussian models, and state space models. Particular attention is paid to fast numerical techniques for classical and Bayesian inference on these models.

Computation Modeling Statistical - University of Queensland

Theoretical computer science treats any computational subject for which a good model can be created. Research on formal models of computation was initiated in the 1930s and 1940s by Turing, Post, Kleene, Church, and others. In the 1950s and 1960s programming languages,

Bioinformatics, Modeling, and Computation

Computational modeling is the use of mathematics, physics and computer science to study the behavior of complex systems by computer simulation. A computational model contains numerous variables that characterize the system being studied. Si
